FOREWORD

Characteristics of Physicians represents an initiative by the American Medical Association's Center for Health Services Research and Development (AMA-CHSRD) to provide comprehensive, detailed and accurate data on the entire physician population in the United States. *Characteristics of Physicians* is related to two other AMA-CHSRD publications: *Physician Distribution and Medical Licensure in the United States*, and *Medical School Alumni*. This publication differs from these in that more characteristics are detailed for smaller geopolitical units of analysis. Comprehensiveness and detail do, however, have their cost. A total of fifty-one volumes, one for each of the States and the District of Columbia, are required in order to present these data.

Successful completion of this project has required cooperation between the AMA and the Bureau of Health Manpower of the Department of Health, Education, and Welfare (DHEW). The *AMA Physician Masterfile* is the data source and considerable resources have been utilized by the AMA in developing the computer programs and designing the volumes. Contract #HRA-232-78-0163 with the Health Resources Administration of DHEW has provided the financial support needed to print and disseminate these volumes. In addition to the bound volumes, print tapes of the information contained in this report are available from the Bureau of Health Manpower. Howard V. Stambler, Director of the Division of Manpower Analysis of the Bureau of Health Manpower is the Contract Project Officer. Views or conclusions contained in this study should not be interpreted as representing the official opinion or policy of the Department of Health, Education, and Welfare.

Characteristics of Physicians was conceived by AMA-CHSRD partially in response to passage of the National Health Planning and Resources Development Act of 1974 (PL #93-641). With passage of this legislation it became apparent that planning and regulation were to become integral components of the health care system in the United States.

The distribution of physicians also has been the object of Federal legislative action for several decades. Since 1965, four separate pieces of legislation each attempting to effect a different distribution of health manpower resources have been enacted by the federal government. The most recent of these is the Health Pro-

fessions Educational Assistance Act (Public Law 95-484). Specifically, this Act ties the distribution of physicians to the specialty distribution. Further, the loan forgiveness program is tied to locating in designated shortage areas. The program is strengthened. Directly related to this legislation is the designation of shortage areas. The criteria for designating shortage areas are those areas designated as such. What are the shortages? These issues and related problems are being resolved.

The *Characteristics of Physicians* will meet some of the data requirements of the market approaches to resource distribution. Assessment of specialty distributions, determination of shortages, and planning to ensure that health manpower require detailed data on relevant aspects of the physician population. Data is being made available with the expressed purpose of being coupled with intelligent analysis and evaluation.

Use of these data, however, is left to policy makers. In addition, the data will be utilized by *Physicians* to make decisions, and migration decisions, and to consult *Characteristics of Physicians* to make types of continuing medical education decisions to be of interest to a large part of the region. Researchers in health manpower sciences have also repeatedly requested this type of data provided. The *Physicians* is being widely distributed to meet the repeatedly expressed needs of these groups.

The efficacy of the market approach to distributive mechanism for health manpower is gaining supporters. It will be before the desired incentives are put into the health care market. The AMA-CHSRD is attempting to provide data relating to health personnel distribution available and, thus, introduce change where possible.

Lynn E. J.

Director,
Health Services Research

ACKNOWLEDGEMENTS

Many persons within the American Medical Association have contributed to the success of this endeavor over its several years. The authors wish to thank Chris N. Theodore, Group Vice-President, Operations and Development Group, for his overall support of this project's goal from its conceptualization in 1976 to its completion. Special appreciation goes to Lynn E. Jensen, Director of the Center for Health Services Research and Development, and Project Director, for his efforts in making the project possible and in assuring the availability of resources necessary to its successful completion. Gene Roback of the AMA Survey Data Center gave helpful advice and comments during conceptualization and throughout the term of this project. Gary Schneier and Raymond Healy, from the AMA Division of Computer and Information Services, provided the programming expertise needed to complete

this project. Jim Durczak designed the layout and did the work for the volumes.

Within the Center, numerous persons played significant roles during the course of the project. Wendling and Glen Misek handled the work relating to verification, progress reports, and coordinating later phases of the preparation of the volumes. Arsenio Oloroso provided editorial assistance in numerous phases of publishing the volumes; distinguishable state editions; and Barnette Collins assumed day-to-day administrative tasks.

Finally, the authors also wish to thank Stambler, Director, Division of Health Statistics, Bureau of Health Manpower, Development, Education, and Welfare, and Project Director, for efforts to make publication and dissemination of the volumes possible. Special appreciation is also due to Kramer, Contract Liaison, for her assistance in the publication and dissemination activities.

INTRODUCTION

Characteristics of Physicians (COP) provides detailed information on several key characteristics of physicians by their geographic distribution in the United States as of December 31, 1975. This is the first American Medical Association publication to present data for the 205 health service areas (HSA's) designated under the National Health Planning and Resources Development Act of 1974 (PL #93-641). There is a separate volume of COP for each of the fifty states and the District of Columbia. Each presents state-specific detailed data for health service areas, demographic county groups, and counties, as well as summary national data for comparative purposes. Thus, the series provides the only compatible data base on physicians across all areas and should be of significant use to practitioners and researchers in the health care industry.

The data presented here are for the physician population practicing in the United States. Detailed characteristics are presented for all physicians with known addresses in a geographic region who are professionally active. In addition, counts of physicians who are inactive or are not classified are provided on each table.

December 31, 1975 was selected as the point in time of this report for the following reasons;

- PL #93-641 was signed in January, 1975, and it was only during 1976 that significant activity was undertaken in response to this legislation. Thus, 1975 represents the last year in which the health care system was not affected by this major piece of legislation and, therefore, is the most appropriate base year for future analyses of the impact of this legislation.
- Because this represents the first statistical series of its scope, an exceptional amount of time had to be expended in the conceptualization of the project, preparation of data set, and writing of the necessary computer programs. However, plans are being developed for publication of these volumes on a more regular and current basis in the future.

The introductory material which follows provides definitions and discussions of the geographic aggregations and the specific physician characteristics tabulated. This publication's relationship to other AMA publications and to other data sources is detailed. In addition, the *American Medical Association Physician Masterfile* is described; a list of the health service areas covered in this volume is given; and a sample of the questionnaire which is sent to physicians for the purpose of updating the *AMA Physician Masterfile* is included. Twenty-one tables listed in the Table of Contents—six national tables, which are repeated in all 51 volumes, and 15 state-specific tables providing: state, HSA, county

REFERENCE ON TABULATIONS

The *Characteristics of Physicians* tabulations on the geographic distribution in the United States as of December 31, 1975, include physicians who were temporarily in foreign countries from all tabulations. All data presented in this publication were developed from the *Association Physician Masterfile*.

Because the primary concern of health planners, in most instances, is to provide care services to meet the needs of the population, many tables report Federal physicians separately. In some instances, the exclusion of Federal physicians may provide an upward bias to the real number of services available to the general public.

Geographical Units of Tabulation

Each volume of COP represents data for the United States as a whole; for the parts of the country by county groups, health service areas, and by state. Each physician is also identified by geographic location on the basis of his mailing address as recorded in the *Masterfile*.

The geographical subdivisions are explained in additional explanations. They are listed below.

County Group

The county group tables are based on the Demographic County Classification System of Marketing Management, Inc. and Standard Metropolitan Statistical Area definitions. The SMSA's service areas of size groups 6 through 9 are based on the area concept established by the Census Bureau in the Budget.¹ An SMSA consists of a central city of 50,000 or more population; the remainder of the county in which the central city is located; and 3) contiguous counties which are economically and socially with the central city. The group 5 SMSA's include "Potential SMSA's" which are under consideration for SMSA status. Groups 1 through 4 include counties in the SMSA. Table A below summarizes the county group classifications.

The independent cities of Baltimore, Maryland; Alexandria, Virginia; and Chesapeake, Virginia, are treated as individual counties and assigned to the county group

DEMOGRAPHIC COUNTY CLASSIFICATION

Demographic County Classification	Definition	Number of SMSA's	Number of Counties	F
Total 50 States and D.C.		299	3,084	2
9	Counties in SMSA's with 5,000,000 or more inhabitants	3	16	
8	Counties in SMSA's with 1,000,000 to 4,999,999 inhabitants	34	170	
7	Counties in SMSA's with 500,000 to 999,999 inhabitants	37	128	
6	Counties in SMSA's with 50,000 to 499,999 inhabitants	184	330	
5	Counties considered potential SMSA's	41	51	
4	Non-Metropolitan counties with over 50,000 inhabitants		229	
3	Non-Metropolitan counties with 25,000 to 49,999 inhabitants		484	
2	Non-Metropolitan counties with 10,000 to 24,999 inhabitants		907	
1	Non-Metropolitan counties with under 9,999 inhabitants		769	

Note: Cities defined as independent are included in "number of counties" column.

Source: Louis J. Goodman, *Physician Distribution and Medical Licensure in the U.S.*, 1976
(Chicago: American Medical Association, 1977), p. 32.

independent cities, largely those in Virginia, are incorporated into the county which encompasses it. For instance, Princess Anne County in Virginia is referred to as Virginia Beach city. In addition, Kalawao County in Hawaii is combined with Maui County and Alaska is divided into four judicial divisions with assignment into appropriate county group based on the population of the judicial division.

Health Service Area

The National Health Planning and Resources Development Act of 1974 mandated the division of the U.S. into health service areas. One section of this publication, Tables 16-18, presents data on Non-Federal physicians in health service areas located entirely or partially within the state covered in this volume. States with more than one health service area within their boundaries have tables for each health service area. In states where the entire state is designated a health service area, there is, of course, only one health service area table.

The existing *Masterfile* data were converted into the health service area classifications based upon the listing of health service areas published in the September 2, 1975, *Federal Register*.

consist of an aggregation of counties. In some states, however, (Alaska; Connecticut; Massachusetts; Illinois; and the District of Columbia), the HSA of Chicago; and the Navajo, Hopi, White Mountain, San Carlos, and Papago Indian Reservations. In these states, service areas were not composites of counties but rather politico-legal boundaries. The exact politico-legal boundaries for each HSA are listed in Exhibit A.

County

Selected characteristics of physicians by county for each specific state are listed in Tables 19-21. If a physician is located in a county, that county is not listed in the county tables. For some states, noncounty geographic areas are treated as counties where the geographic boundaries used differ. This usage parallels the usage in the group tables. The independent cities of St. Louis, Missouri; Baltimore, Maryland; Alexandria, Virginia; and Hampton, Virginia; and Chesapeake, Virginia, are treated as individual counties. All other counties, largely those in Virginia, are incorporated into the county which encompasses it. Princess Anne County in Virginia is referred to as Virginia Beach city.

Physician Characteristics

The distributions of physicians are described in this volume in terms of a number of professional characteristics, with some individual characteristics cross-tabulated with others. Key characteristics include specialty, major professional activity, age, sex, board certification, Federal or Non-Federal employment, and state and county of graduation. The thirty-six specialty classifications used in this publication are the same as those used in other AMA publications such as the *Physician Distribution and Medical Licensure in the U.S., 1976* and are presented in Table B. A physician's specialty classification is defined as that in which he/she reports spending the largest number of practice hours. A number of county tables utilize the classification system of primary care/non-primary care specialists. Primary care physicians, for the purposes of these tables, are physicians whose specialty is general practice, family practice, internal medicine, pediatrics, and obstetrics/gynecology. Another area of general interest is specialty board certification. Certification indicates that the physician has satisfactorily completed an examination in an area of specialization and has taken all

of the specific training requirements for a specialty board.² The licensed physician may practice any specialty regardless of whether he/she is board certified or not. Tables in this volume indicate board certification in some specialties, but not necessarily the specialty in which the physician is classified. However, over 90 percent of physicians reported as board certified are certified in the specialty in which he/she is classified.³

Physicians' professional activity by specialty is reported to assess the availability of patient care. Total professional activity is reported by patient care subgroups of patient care on the basis of

² "The boards are in no sense educational institutions. A certificate of a board is not to be considered a degree. It is on any person legal qualifications, privileges, not on any person's medical education. The boards do not interfere with or limit the professional activities of a licensed physician. They do not desire to interfere in the regular or legitimate practice of medicine." Liaison Committee on Medical Education, *Directory of Accredited Residencies*, 1978, American Medical Association, 1978), p. 367.

³ *AMA Physician Masterfile, 1976*. Special Tabulation of Physician Activity, American Medical Association, 1976.

practice" and "hospital based practice," either as a resident or full-time hospital staff. Non-patient care activities, such as administration, medical teaching, and medical research are also reported separately. Two of the activity categories—inactive and not classified—may need further clarification. Inactive physicians are those who have reported to the AMA via the Physician's Professional Activity questionnaire that they are either retired, semi-retired, permanently disabled, temporarily not in practice, or not active for other reasons. Physicians who are categorized as not classified are those for whom the AMA has not received any information as to their type of practice and present employment.

Definitions of the two other classifications used in describing physician characteristics are: Age as defined in terms of intervals of under 35, 35 to 44, 45 to 54, 55 to 64, 65 to 75, and 75 and over; Federal employment as defined as employment by the Veterans Administration, Military Services, the U.S. Public Health Service, and other Federal Service.

The medical education background of physicians is presented in several forms. Physicians who graduated from United States medical schools are categorized by the school of graduation and the state in which they currently are practicing medicine. In addition, physicians located in a particular county group or county within a state are cross-categorized either as having graduated from a medical school in the state, in a contiguous state, in some other state, in Canada, or outside the United States and Canada.

RELATIONSHIP TO OTHER AMERICAN MEDICAL ASSOCIATION PUBLICATIONS AND TO THE COOPERATIVE HEALTH STATISTICS SYSTEM (CHSS)

Although previous AMA publications, *Physician Distribution and Medical Licensure in the U.S.*, and *Medical School Alumni*, have reported similar information, *Characteristics of Physicians* provides more detailed information than previously available in published form.

The publication has two key features: greater detail of physicians' characteristics and greater detail with respect to geographic units. More detail is provided for age distributions, sex, and specialty board certification—for states, county groups, individual counties, and for the health service areas. Thus, this publication attempts to meet a more extensive set of data needs not met by other AMA publication series.

A data collection effort to provide information similar to the data published in *Characteristics of Physicians* is being undertaken by the Cooperative Health Statistics System (CHSS). The CHSS is a joint effort

available in the *Characteristics of Physicians* publication, *Characteristics of Physicians* provides a detailed analysis of the major professional activities of physicians. In addition, it provides board certification statistics for individual HSA's and county specialty distributions by county, and specialty distributions for Federal physicians. Further, the CHSS collection effort relies on 50 separate agencies, uniformity in quality and effort is maintained. And indeed the CHSS is collecting physician data from a limited number of states at this time.

INTERPRETATION OF TABULATIONS

Because of the complexity and detail presented in these volumes, care must be taken in their interpretation. A few explanatory comments are necessary about the treatment of the various classifications used in these tabulations.

As mentioned previously, it was felt that data on professionally active physicians would be most useful for research and planning purposes. At the same time, however, it was felt that the total pool of physicians manpower should be represented in these volumes for individual purpose caused some problem in the development of certain tables because of the inactive and not classified activity categories. These two categories are included in the tabulations but are treated differently depending on the type of cross-tabulation involved. Grand totals in tables in which specialty is cross-tabulated with professional activity, the inactive and not classified physicians are included in the total value distributed by specialty. Instead, these two categories are provided at the bottom of the specialty column as "Inactive," "Non-classified," and "Unknown". To arrive at the total value, the inactive and not classified values should be added to the other major professional activity categories. This applies to Tables 1, 3, 6, 9, 16, and 19.

Address Unknown

Physicians with unknown addresses are included in Table 1 for informational purposes. Again, this information is not distributed throughout the table but is included in the grand total. Physicians with unknown addresses are excluded from all other national tables; therefore, the grand total value on Table 1 exceeds the total on Table 2 plus the total in Table 3, and the total on Table 4.

Availability of Data

This concludes the description of data available in the COP series. Every effort has been made to make the most frequently requested information in the series meaningful to most users. These data are now made available in the form of print tape, microfiche, and Bureau of Health Manpower. In addition, plans are underway to publish the COP series on a continuing basis.

The section that follows provides a brief overview of the *AMA Physician Masterfile* on which this publication is based.

AMA PHYSICIAN MASTERFILE⁵

While data collection has been an AMA activity for many years, the objectives, collection techniques, and use of the data undergo constant review and have undergone considerable changes each year. A masterfile of physicians has been maintained by the Association since 1906. However, in the early days of its existence, the *Masterfile* was primarily a listing of physicians maintained as a record-keeping device for membership and mailing purposes. Decisions were made on a day-to-day basis without a unified approach and without regard as to what these decisions would mean in terms of statistical methods and interpretation of the data.

As research activities within the Association became more sophisticated, the complexity of data requirements increased. The *Masterfile* was, therefore, expanded and improved to meet these requirements. Today, the *AMA Physician Masterfile* is the most comprehensive and complete source of physician data in the United States. It includes information on every physician in the country, members and non-members of the Association, on graduates of American medical schools who are temporarily practicing overseas, and graduates of foreign medical schools who are in the United States and meet U.S. education standards for primary recognition as physicians. Thus, all physicians comprising the total physician manpower pool are included on the *AMA Physician Masterfile*.⁶

A file is started on each individual upon entry into medical school or, in the case of foreign and Canadian graduates, upon entry into the U.S. As a physician's training and career develops, additional information is added to the file—e.g., internship and residency training, licensure board certification, professional affiliations, and other characteristics. Although such characteristics change over time, they are not subject to *constant* change. These types of characteristics are included in the "historical" portion of the *Masterfile*. In addition, there is the "current professional activities" portion of each physician's record that identifies his current address, professional activity, specialties, and employment status. By definition, this current portion of the *Masterfile* is subject to constant change and must be updated through intense monitoring techniques.

Prior to 1966, physician classification by specialty, activity, and employment was made through the Classification of Professional Activities (CPA) system, which was based upon a "private practice/not in private practice" concept. Data were collected under this system via a short postcard-type questionnaire en-

titled *Verification of Physician Activities*. Several problems were a major one being that the system financial practice arrangements professional activity. The United States Committee on Vital and Health Sta-

The ongoing series on physician activities conducted by the American Medical Association meets the need for data on age, sex, and specialty. However, the AMA inquiry without specifying as to direct queries relating to the number of hours worked in each activity, manpower cannot be properly compared for different activities.

This recommendation gained momentum in 1966 when the then AMA Research, which has been replaced by the Center for Statistical Analysis and Information, began its efforts to update the *AMA Physician Masterfile*. In the process, it identified four major deficiencies in the classification system:

1. Existence of categories that are exclusive, resulting in gaps between and within employer categories.
2. Lack of a criterion upon which to base classification.
3. Lack of information on each individual record.
4. Unavailability of information for the annual verification process.

These deficiencies were of sufficient magnitude to require major revisions in both the system and data collection procedures. The American Medical Association (the Reclassification of Physicians) initiated to redesign the classification system. The AMA undertook the Reclassification of Physicians with the National Center for Health Statistics, United States Public Health Service, and Demographic Surveys of the United States and knowledgeable researchers.

The first step in reclassification was the revision of the format of the 1966 edition of the *Physicians, Hospitals, and Health Facilities* of the AMA Center for Health Statistics Development. Through a series of revisions, the old *Masterfile* category "private practice" was converted to "patient care/other professional activities."

system. This facet of the Reclassification Project was implemented in 1968, with the adoption of a new questionnaire—*Record of Physicians' Professional Activities*.

The new questionnaire was first used in 1968 in the census survey of 317,000 physicians. Each physician was asked to indicate the average number of hours worked per typical week in several areas within three categories—Professional Activities, Specialization, and Present Employment Status. The use of a "time spent" device gave the physician a criterion upon which to classify his practice, and the confusion between and within the activity and employer categories was eliminated. After five mailings a usable response of 87.4 percent was attained.

All returned questionnaires were passed through a series of clerical editing procedures and a quality control checkpoint. They were then keypunched and the data processed through a series of computer programs which assigned the activity, specialty, and employment classification to each physician record.

A complete census was scheduled to be conducted every three years. However, in order to verify the information gathered in 1968 under the new system, a complete census of 325,000 physicians was made again in 1969. The questionnaire, structurally the same as that of 1968, contained the physician's 1968 response with a column provided for corrections or changes. A usable response rate of 86.8 percent was attained. Analysis of the two sets of data revealed that the data collected in 1969 were consistent with that of 1968, therefore, confirming that the questionnaire used to gather the data was a reliable survey instrument. The most recent complete census, for the purpose of this project, was conducted in 1973. The 1973 questionnaire is identical to that used in 1969 except for the addition of a section requesting address and other general information. The usable response rate was consistent at 86.8 percent. A copy of the questionnaire used in the 1973 census is presented in Exhibit B.

Between census years, a comprehensive computerized weekly updating system keeps the *Masterfile* current. Each physician's record is dated to reflect the most recent change, which may be obtained for AMA mailings or publications, company mailings, physician correspondence, or hospitals, government agencies, medical schools, medical agencies, medical societies, specialty boards, and licensing agencies. Any indication of a change in professional status or address triggers a questionnaire similar to the one used in the 1973 census. The physician is placed on a "change" file while follow-up mailings are made to raise the response rate. In 1975, approximately 3,500 weekly change questionnaires were mailed per week.

As an additional check on the *Masterfile* between census years, the AMA's Center for Health Services Research and Development conducts year-end computer audits. A comparison of 1972 and 1973 year-end data shows the same consistency as the complete census data

its annual and periodic series of statistical data. These include the publications *Distribution of Physicians*, *Selected Characteristics of the Physicians*, *Medical School Alumni*, *Foreign Graduates*, as well as reports on AMA member physician manpower, women physicians, and society statistics.

While the data collected for the Record of Professional Activities questionnaire represent input to the *AMA Physician Masterfile*, data from other sources are also incorporated. These other include:

- *Medical Schools*—Provides data on year of graduation, birthplace, birthplace, and professional appointments.
- *State Licensing Boards*—Provides licensure of physicians.
- *Hospitals*—Provides information on residents, birthplace, and foreign graduates in training.
- *Department of Defense*—Provides data on physicians in government service.
- *American Specialty Boards*—Provides board certification of physicians.
- *Medical Societies*—Provides data on members in specialty, state, and county societies.
- *Educational Council for Foreign Graduates*—Provides data on foreign graduates.

While many sources provide data for inclusion in the *Masterfile*, data are also often extracted from the *Masterfile* for use by these agencies. In addition, the *Masterfile* is used by the National Center for Health Statistics; the Office of Emergency Preparedness; the Office of the President of the U.S.; the Office of the Secretary of DHEW; the National Institutes of Health; various other federal, state, and local government agencies; numerous universities and medical schools; county, and specialty medical societies; the pharmaceutical industry; and ten addressing com-

EXHIBIT A:

HEALTH SERVICE AREA DESIGN JULY 1, 1976

The National Health Planning and Development Act of 1974 (PL #93-641) mandates that health service areas be established throughout the United States. The legislation specified that each health service area meet the following requirements:

1. The area must be a rational geographic entity containing a comprehensive range of health services, and of a character suitable for the planning and development of health ser-

2. To the extent practicable, the area must include at least one center for the provision of highly specialized health services.
3. Upon establishment, the area must have a population between 500,000 and three million, with the following exceptions: the population may exceed three million if the area includes a standard metropolitan statistical area (as determined by the Office of Management and Budget) with a population of more than three million persons; and the population of an area may be less than 500,000 in unusual circumstances, but not less than 200,000 except in highly unusual circumstances if the Governor of each state in which the area is located determines, with the approval of the Secretary, that the area meets the other requirements of this subsection. "Unusual" and "highly unusual" circumstances are to be defined by the Secretary in regulations.
4. To the maximum extent feasible, the boundaries of the health service area must be coordinated with the boundaries of Professional Standards Review Organizations, existing regional planning areas, and State planning and administrative areas.

Each standard metropolitan statistical area (SMSA) must be entirely contained within the boundaries of one health service area unless the Governor of each State in which a SMSA is located determines, with the approval of the Secretary, that a health service area should contain only part of the SMSA in order to meet the other requirements of this subsection.

The 205 Health Service Areas designated in July 1976 * are the definitions used in this publication. A listing of the HSA's and the counties, towns, or cities comprising them for the state treated in this volume follows below.

RECORD OF PHYSICIANS' PROFESSIONAL ACTIVITIES

DIRECTORY OF PHYSICIANS

Center for Health Services Research and Development

AMERICAN MEDICAL ASSOCIATION

535 N. Dearborn Street

Chicago, Illinois 60610

Dear Doctor:

Please complete this questionnaire as soon as possible so that your official record is up-to-date with correct and current information for printing of the 1973 *AMA DIRECTORY*. Data obtained from this questionnaire will be aggregated and used to describe the distribution of physicians and to analyze health manpower. However, *NO information from your record will be released* to any organization for the purpose of developing independent physician data files.

Thank you.

Instructions

1. Please answer every question on the basis of your current activities.
2. **Indicate any changes.** Information which you provided previously has been printed in this form. Please complete unanswered sections and make discrete changes where applicable.
3. Upon completion, return the questionnaire at your earliest possible convenience, using the preaddressed envelope.

Contents

The questionnaire is divided into four sections:

- I. Professional Activities—the types of activities in which each physician spends the most time during an average week.
- II. Specialization—the time physicians spend in their major fields of specialization.

Please describe your PRESENT professional activities by indicating the average number of hours spent during a typical week. Please answer EVERY question 1-8. If you do not spend any hours on any particular activity below, so indicate by entering zero (0) hours in appropriate spacing.

1. How many hours per week do you currently spend in a full-time TRAINING program as an intern or resident? Indicate whether you are a(n)

1 ☐ INTERN 2 ☐ RESIDENT.

(If you checked either of the boxes, please proceed to questions 6, 7, and 8 and answer, if applicable.)

2. How many hours per week do you spend in PRACTICE INVOLVING DIRECT CARE OF PATIENTS? Direct care means seeing patients; however, it also includes patient services by such physicians as pathologists and radiologists.

Exclude time spent in training, teaching, or research. Include travel time and time spent on record keeping and other office work connected with your patients.

3. How many hours per week do you spend on ADMINISTRATIVE ACTIVITIES, AS A SALARIED STAFF MEMBER OR EXECUTIVE OF AN ORGANIZATION?

Exclude time spent on record keeping and office work connected with management of your own practice. Include activities connected with the administration or staff committees of a hospital or other health facility or agency, clinic or group, or any other organization by which you may be salaried as an executive or staff member.

4. How many hours per week do you spend on MEDICAL TEACHING?

Include hours spent in teaching as well as in preparation for subjects taught in medical schools, nursing schools, other hospital schools, hospitals, colleges, universities, or any other educational institutions.

- a. OF THESE HOURS how many do you spend on direct care of patients?

Exclude time devoted to patient care by house staff under your supervision.

In view of possible overlap of hours spent in teaching and research, please do not double-count such hours, but report them instead in the most applicable category.

5. How many hours per week do you spend on MEDICAL RESEARCH?

All phases of investigating medical problems regardless of source of funds for such research.

- a. OF THESE HOURS how many do you spend on direct care of patients?

Exclude time devoted to patient care by house staff under your supervision.

6. How many hours per week do you spend on any OTHER medical activities (*not listed above*) INVOLVING DIRECT CARE of patients?

7. How many hours per week do you spend on any OTHER medical activities (*not listed above*) NOT INVOLVING direct care of patients?

8. About how many hours per week do you spend in ALL PROFESSIONAL ACTIVITIES? Total of questions 1 through 7 (exclude 4a and 5a)

If you indicated "zero" on question 8, or if *none* of the above categories apply to you, please answer question 9.

9. Are you: 1 ☐ RETIRED 2 ☐ SEMI-RETIRED

3 ☐ PERMANENTLY DISABLED

4 ☐ TEMPORARILY not in practice

5 ☐ Not active for other reasons (*please describe*) _____

Total of Section equivalent to to Section II, and Section III, resp

other side of this questionnaire for list of designated specialties.)

Prior Census		Changes If Any	
Specialty	Hours	Specialty	Hours
Primary			
Secondary			
Third			

III. PRESENT EMPLOYMENT STATUS

Please indicate the current number of hours spent per week for the following types of employers. (Note: employer should **NOT** be confused with the physical location of where your hours are spent.) Please answer EVERY question 1-10. If you do not spend any hours for any one of the following employers, so indicate by entering zero (0) hours.

		HOURS PER WEEK	
		Prior Census	Change If Any
1. Self: "solo" practice		HRS.	1 _____ HRS.
2. Self: partnership practice		HRS.	2 _____ HRS.
3. Arrangement with other physician(s): non-group		HRS.	3 _____ HRS.
4. Group practice		HRS.	4 _____ HRS.
5. MEDICAL SCHOOL (or parent university)		HRS.	5 _____ HRS.
6. NON-GOVERNMENTAL hospital		HRS.	6 _____ HRS.
7. City or county government	a. HOSPITAL	HRS.	7 _____ HRS.
	b. OTHER than hospital	HRS.	8 _____ HRS.
8. State government	a. HOSPITAL	HRS.	9 _____ HRS.
	b. OTHER than hospital	HRS.	10 _____ HRS.
9. U.S. government	a. HOSPITAL	HRS.	11 _____ HRS.
	b. OTHER than hospital	HRS.	12 _____ HRS.

Indicate Federal Agency:

- | | |
|--------------------------------------|--|
| 1 <input type="checkbox"/> Army | 4 <input type="checkbox"/> Public Health Service (C.C. & C.S.) |
| 2 <input type="checkbox"/> Navy | 5 <input type="checkbox"/> Veterans' Administration |
| 3 <input type="checkbox"/> Air Force | 6 <input type="checkbox"/> Other _____ (SPECIFY) |

10. OTHER ORGANIZATION—Not listed above

(all types of insurance carriers, pharmaceutical companies, corporations, voluntary organizations, medical societies, associations, grants, foreign countries, etc.)

HRS. 14 _____ HRS.

If the address printed at right is NOT correct, please make appropriate changes in space provided.

ADDITIONAL INFORMATION

1. Is the machine printed address BELOW:

a. *Both* your Professional and

Home Address? ☐ 13

(If so, proceed directly to Question 3.)

b. Your *Professional Address only*? . . .

(If so, please enter your HOME address in space following (c) below and proceed to Question 2.) ☐ 14

c. Your *Home Address only*?

(If so, please enter your PROFESSIONAL address in following space.) ☐ 15

(STREET)	14-15
(CITY, STATE, ZIP)	44-73

2. Please indicate at which address you wish to receive *medically related* material:

Professional Address ☐ 13

Home Address ☐ 14

3. Please indicate below the county and state of your HIGH SCHOOL graduation if in the United States or Possessions.

(County) 15-17 (State) 18-19 20-21

If already provided, please verify following:

(County) (State)

GROUP NAME

ADDRESS

CITY-STATE-ZIP

4. Please supply the following information:

Social Security No.: _____ 22-32

Age: _____ 33-35

Sex: ☐ 36 ☐ 37

Male Female

Race: ☐ 38 ☐ 39 ☐ 40-41

White Black Other
